

The Fujitsu CAN Controllers

Work in progress

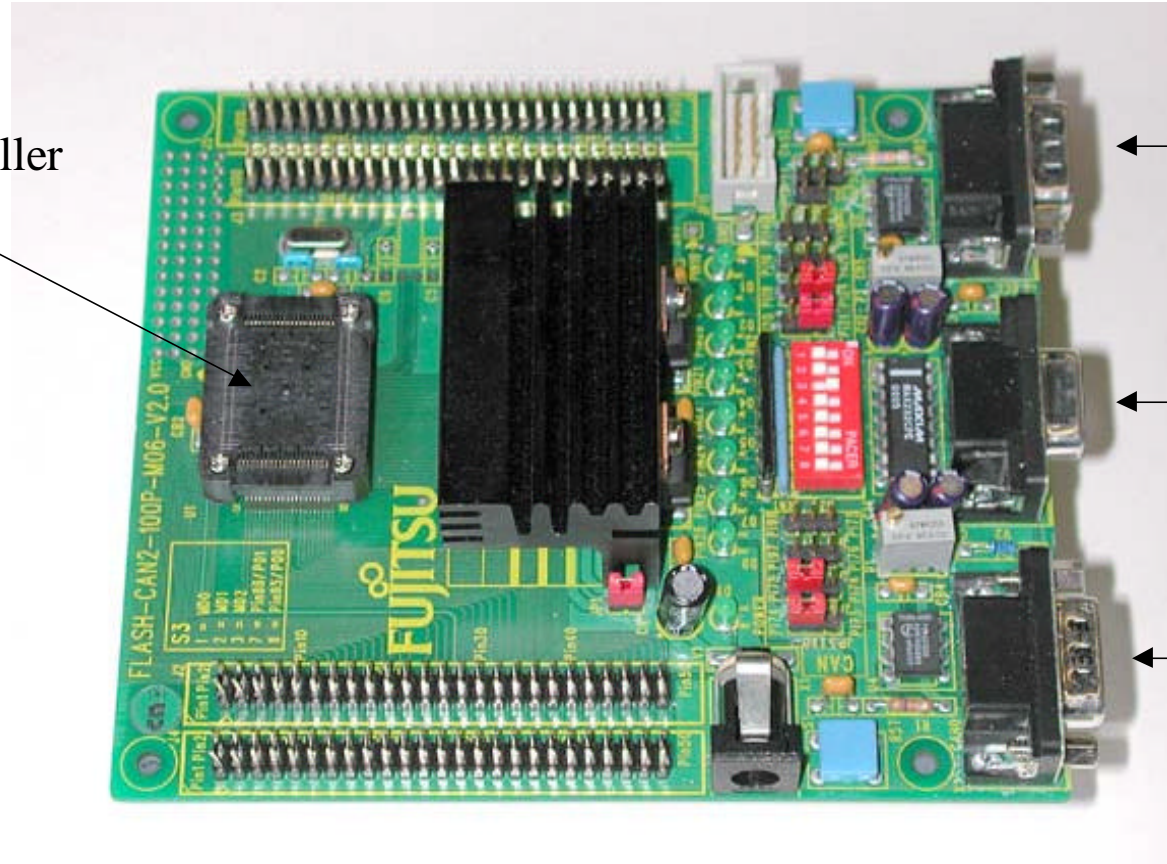

The Chips

- Features on the chips:
 - Up to 3 CAN interfaces on the chip
 - Flash Programmable
 - A single chip solution
 - On chip 10/8 bit ADC

The Demo Board

Micro-controller

Can 1

RS232

Can 2

What I'm Currently Doing

Using the demo board I'm constructing a simple Voltmeter that will eventually send it's data over the CAN bus.

So far I have got the basic code for the Voltmeter written, it just needs debugging...

As soon as debugging is finished I'll start trying to get the CAN code up and running.
