

JEM C++ Simulation

Daniel Öijerholm-Ström

and

Åsa Oscarsson

General Ideas

- Classes derived from hardware
- General class design
- Cascade update principle
- Container class object

The Key Elements

- DataPorts, ownership
- Using STL classes
- Update order
- Multiple update requests

Where are we and what's next?

- Flow tests
- Container class design
- Control signals
- Implementation of JEM specific algorithms
